Their Future**

Without Your Help...

In the hub of criminals, 17 kilometers away from the main road, Khoj School for Community Education is located in the village Thathi Bhanguaan in the district of Sheikhpura.

In 2003, The School emerged out of a development initiative that was focused on community development through women and children's education in around thirty five villages.

One hundred and thirty seven children - from play group to grade 8 - are studying in the school.

The School aims at a kind of education that is not only of high quality but also ensures that the content of education is relevant to the learners' socioeconomic realities and rooted in their learning needs.

The methodologies are focused on conceptual understanding, logical thinking, creativity and informed and result oriented action through intensive dialogue and debate, role playing, storytelling, singing, reading, writing, cooking, playing, scientific experimentation, growing flowers and vegetables, making clay toys and learning through computers.

... something is Missing

Philosophy

Children are born philosophers and mathematicians, and they come to this world ready and programmed to learn a language. Children have a natural eagerness to explore, discover and bring things out. We must nurture their curiosity. We must make every effort to hone their critical thinking skills which demands that we respect their ideas and opinions and give value to their standpoints. They are very logical in their arguments so our response must be as logical.

Teaching must build on the vast body of children's previous knowledge.

The School is in the process of making.

It has 5 classrooms, a library, a science lab, a computer lab , staff room, 3 lavatories, a playground and an organic school garden.

Five more classroom is the urgent need of the School.
