

LWH'S GREEN BUILDING ACADEMY

Long Way Home's Green Building Academy is a month-long intensive green building course featuring both classroom and hands-on learning in San Juan Comalapa, Guatemala. The intent of the program is to give participants the knowledge & concepts to be able to build their own home or structure using green building methods and materials.

Learn the fundamentals: design, site establishment, structure types, power, water management, and the use of alternative materials (such as tires, eco bricks, earthbags and more).

Be a part of a meaningful project. Your practicum is building a tire house from the ground up that will benefit a local family with limited economic resources.

Join us for just USD \$2,700 per person, which includes lodging, three meals a day, and transportation for the full 30 days of the session.

Green building can be a tool for self-sufficiency & sustainability throughout the world and the Academy aims to spread this knowledge so that it can be replicated across the globe.
