Sea invasion in Senegal

LET US SAVE THE CHILDREN

The district of Guet Ndar located in our zone of intervention is touched by the advance of the sea which is a natural catastrophe on the one hand with the global warming and on the other hand with the opening of the breach causing many loss of life and property damage making many children orphaned.

This seaside district, otherwise known as the fishermen's district, covers an area of almost 17 ha and is structured around three sub-Lodo neighborhoods in the north, Pondoxole in the center and Dak in the south.

Occupied on the least of its square meters, it offers a spatial disorder that finds its explanation in the importance of population growth where there are approximately 26,000 inhabitants, a density of 1605 inhabitants per hectare. This district of Guet Ndar ranks 5th in the world in terms of population density.

Two main roads cut the district lengthwise while eleven cross streets are identified. To this must be added dozens and dozens of tiny anarchic lanes that complete a precarious orthogonal organization. The metaphor of describing the neighborhood as an anthill never made so much sense.

Population growth, which is constantly increasing, which is synonymous with overcrowding and promiscuity within the concessions, this district is more than ever threatened by the advancing sea.

DONATION

10\$

will purchase a hygiene kit for a child

25\$

will provide health insurance for a child for one year

50\$

will buy a mattress for a child

60\$

will provide equipment and detergent product for hygiene for one child

70\$
