Educate a Girl. Educate a Nation.

Girls' education and empowerment in Sierra Leone | Project overview

The opportunity

Girls in Sierra Leone can face financial and social barriers that interrupt their education. Costs for school materials and tuition, limited learning resources, teenage pregnancy, and gender discrimination can make it harder to stay in school and pursue future opportunities.

Develop Africa works to help girls remain engaged in learning and develop the confidence and skills to pursue their goals. The project combines immediate educational assistance with mentoring and opportunities to explore technology and STEM.

What the project supports

Access to school: Tuition assistance, books, uniforms, school supplies, and meals.

Learning and guidance: Tutoring, mentoring, and encouragement to continue education.

Skills for the future: Computer literacy and opportunities to explore science, technology, engineering, and mathematics (STEM).

From access to opportunity

A broader approach to helping girls learn, grow, and thrive

Supporting study

STEM opportunities

How support makes a difference

Financial assistance helps reduce immediate barriers to attendance. Educational materials and study support make participation more practical. Mentoring, computer training, and STEM activities broaden the skills and possibilities girls can explore.

The long-term vision

When girls can continue their education, they have more opportunities to build skills, pursue employment or further study, and contribute to their families and communities. The project aims to support greater confidence, economic independence, and a positive influence across generations.

$50 can help keep a girl learning.

Your gift contributes to educational supplies and support through Develop Africa's girls' education project. Donations of any amount are welcome.
