

DotBook is a laptop that is very recently developed by Saksham and IIT Delhi KritiKal Solutions and Phoenix Medical Systems in interdisciplinary teams. After five years of research and testing the product is ready to be launched this year.

As it has a Braille display instead of a screen it can be easily used by visually impaired and blind people.

At present, high-end Braille displays are very expensive for users even in high income countries while being completely unaffordable for those in lower-middle income countries like India.

Based on IIT Delhi's patented Shape Memory Alloy technology, DotBook brings this cost down to 20%, thus making this solution accessible to the millions who were previously uncatered-to.

DotBook comes packed with custom developed applications & features that helps to independently carry out day to day tasks as well as office work.

Word applications to read, navigate, edit documents easily.

Webbrowser to surf online at the fingertips.

Access to online libraries like Sugamya Pustakalaya

The DotBook offers visually impaired access to information beyond Braille books and magazines and helps them to become an integrated part of our digital society.

About Mitra Jyothi

Founded by Ms. Madhu Singhal in 1990, Mitra Jyothi is a registered trust located in Bangalore. Mitra Jyothi's mission is to assist visually impaired individuals and enable them to lead independent and dignified lives through education, training, technology, counselling and communication.
