About Us

Omega Global Development is a faith-based nonprofit whose mission is to transform communities by supporting, developing, and creating sustainable initiatives like the Sibanor Clinic in the Gambia.

Our Project

Our Maternal and Baby Health Project offers new mothers post-natal baby bags and assistance to guarantee newborns begin life healthily. Additionally, the project supplies medical resources to the clinic to support midwives in conducting safe deliveries.

Sibanor Clinic

Situated in rural Gambia, Sibanor Clinic serves as a beacon of hope within the community. This effort aims to support the clinic in delivering essential services to vulnerable populations, promoting safe births, and reducing maternal and infant mortality rates.

How You Can Help

Your assistance will enhance short-term health outcomes and establish a basis for long-term enhancements in community health and well-being. By focusing on the well-being of mothers and infants, you can make substantial and enduring improvements for generations to come.

The goal of this project is to enhance the current healthcare infrastructure through investments in facility improvements, medical equipment, and necessary supplies. Furthermore, our initiative will broaden outreach efforts and mobile clinics to serve remote villages, guaranteeing that healthcare services are accessible even in the most isolated communities.
