

HEALING HAVEN

MEDICAL & QUARANTINE UNIT

01. STRATEGIC NECESSITY

Transitioning to Clinical Rehabilitation

"Saving an animal is only the first stage; true healing requires clinical infrastructure, biosecurity, and constant monitoring."

Currently, critical interventions take place in makeshift spaces, generating significant vulnerabilities:

- **Epidemiological Risk:** Lack of airtight isolation facilitates the spread of aggressive viruses (Parvovirus).
- **Thermal Instability:** Post-operative animals cannot regulate their temperature in uninsulated areas.
- **Logistical Inefficiency:** Transporting patients outdoors exposes wounds to dust and thermal stress.

02. TECHNICAL SOLUTION

The project aims to transform a 35 sqm space into a biosecure unit:

- **Clinical Portal:** Direct internal access from the surgery room for second-by-second monitoring.
- **Total Asepsis:** Medical ceramic finishes and suspended ceilings for rapid disinfection.
- **Microclimate Control:** Stable heating at 23-24°C and dedicated electrical circuits for oxygen.

03. RESOURCE ALLOCATION

Financial Transparency

WORK PHASE	TECHNICAL DETAIL	INVESTMENT
Structural Engineering	Clinic portal, PVC joinery, compartmentalization	€3,500
Biosecurity Finishes	Medical tiling/flooring, antimicrobial paint	€2,800
Clinical Systems	Medical electrical grid, specialized heating	€2,200
ICU Equipment	Professional stainless steel quarantine units	€2,500
TOTAL REQUIREMENT		€11,000

By funding this project, No Limit Pets not only saves lives but creates a gold standard for the treatment of neglected animals in the Bacău region.
